

**NAME**

caller

**SYNOPSIS**

get the name and line number of the calling routine

**USAGE**

```
local log = require "lib/dtutils.log"
```

```
result = log.caller(level)
```

level - number - the number of stack levels to go down to retrieve the caller routine information

**DESCRIPTION**

caller gets the name and line number of the calling routine and returns it

**RETURN VALUE**

result - string - the name and line number of the calling function or 'callback: ' if the attempt to get the caller returns nil
