

NAME

filename_increment

SYNOPSIS

add a two digit increment to a filename

USAGE

local df = require "lib/dtutils.file"

```
local result = df.filename_increment(filepath)
filepath - string - filename to increment
```

DESCRIPTION

filename_increment solves the problem of filename conflict by adding an increment to the filename. If the supplied filename has no increment then "01" is added to the basename. If the filename already has an increment, then 1 is added to it and the filename returned.

RETURN VALUE

result - string - the incremented filename
