

NAME

engine

SYNOPSIS

get and set the output engine

USAGE

```
local log = require "lib/dtutils.log"
```

```
result = log.engine(level, ...)
```

level - table - the log level to get or set the engine for, one of log.debug, log.info, log.warn, log.error

log.success, log.always, log.screen, log.critical

... - function - the output function, one of dt.print, dt.print_error, dt.print_log, print

if not function is included, the current engine is returned for the specified log level

DESCRIPTION

engine returns the output engine for the specified log level if a second argument is not

supplied. If a function is supplied as the second argument, then the output engine for the specified log level is set to that.

RETURN VALUE

result - function - the current output engine
