

NAME

executable_path_widget

SYNOPSIS

create a widget to get executable path preferences

USAGE

```
local df = require "lib/dtutils.file"
```

```
    local widget = df.executable_path_widget(executables)
```

```
    executables - table - a table of strings that are executable names
```

DESCRIPTION

executable_path_widget takes a table of executable names

and builds a set of file selector widgets to get the path to the executable.

The resulting widgets are wrapped in a box widget and returned.

RETURN VALUE

widget - widget - a widget containing a file selector widget for each executable.
