NAME

      file_move

SYNOPSIS

      move a file from one directory to another

USAGE

      local df = require "lib/dtutils.file"

        local result = df.file_move(fromFile, toFile)
         fromFile - string - name of the original file
         toFile - string - the new file location and name

DESCRIPTION

      Move a file from one place to another. Try a succession of methods from
        builtin to operating system to a pure lua solution.

RETURN VALUE

      result - boolean - nil on error, some value on success
