NAME
prequire

SYNOPSIS
a protected lua require

USAGE
local du = require "lib/dtutils"

local status, lib = du.prequire(req_name)
  req_name - the filename of the lua code to load without the ".lua" filetype

DESCRIPTION
prequire is a protected require that can survive an error in the code being loaded without
bringing down the calling routine.

RETURN VALUE
status - boolean - true on success
lib - if status is true, then the code, otherwise an error message

EXAMPLE
local status, lib = prequire("lib/dtutils.file") which would load lib/dtutils/file.lua which
would return a status of true and the reference to the library in lib.
