NAME

set_executable_path_preference

SYNOPSIS

set a preference for the path to an executable

USAGE

local df = require "lib/dtutils.file"

df.set_executable_path_preference(executable, path)
  executable - string - the name of the executable to set the path for
  path - string - the path to the binary

DESCRIPTION

set_executable_path_preference takes an executable name and path to the
executable and registers the preference for later use.
